MEDICARE BENEFICIARY CHARACTERISTICS AND OUT-OF-POCKET COSTS

Containing Medicare costs is an important goal, both in terms of improving affordability for those who need care and ensuring long-term sustainability of the program. Some policy makers, however, believe that seniors do not have enough “skin in the game” and are proposing to shift more out-of-pocket costs onto beneficiaries – this approach would fail to address the underlying causes of cost growth. It does not take into account three key facts: (1) The vast majority of beneficiaries have low or modest incomes; (2) The Medicare benefit package is not overly generous; and (3) Medicare beneficiaries already pay significant out-of-pocket costs.

Some plans propose increasing Medicare cost sharing, which is already high, has been increasing rapidly, and would make health care unaffordable for millions of older Americans. It is critical to understand that most beneficiaries struggle financially, already have high health costs, and cannot pay more.

LCAO recognizes the need to bring down the nation’s deficit and reduce health care spending. With respect to Medicare, we support savings mechanisms that address system-wide health care inflation and build on the cost savings and efficiencies of the Affordable Care Act, not merely shifting even more costs on to the backs of Medicare beneficiaries. Even the American Academy of Actuaries agrees: “[I]mproving Medicare’s long-term sustainability requires slowing the growth in overall health spending – not simply shifting costs from one payer to another.”i

Medicare Beneficiary Characteristics

• **Most people with Medicare have low or modest incomes.** In 2012, half of all people with Medicare lived on incomes of $22,500 or less per year— just under 200% of the federal poverty level. And half of beneficiaries had $77,500 or less in savings. One quarter of Medicare beneficiaries have annual incomes at or below $14,000.ii

• **Older women and people of color live on even less.** In 2011, median income for older women amounted to just $15,072 per year. Median annual incomes are also lower for diverse communities— $15,252 for African American Medicare beneficiaries and $13,805 for Hispanic beneficiaries. The incidence of poverty is higher among women and communities of color. Older people of color are twice as likely to live in poverty – 18% among African Americans and Hispanic households vs. 7% among white households.iii

• **Many beneficiaries are in poor health.** Almost half (40%) of the Medicare population is living with three or more chronic conditions and an estimated 23% have a cognitive or mental impairment.iv These individuals rely on Medicare to help afford essential treatment.

Medicare Beneficiary Out-of-Pocket Costs

• **Health care costs are a significant expense for Medicare beneficiaries.** In 2010, the average Medicare household spent $4,500 per year on health care. Medicare premiums account for the most significant expense – 10% of spending per household. In the last 5 years of life, beneficiaries spend $38,688 on average. For 25% of beneficiaries, out-of-pocket costs average $101,791 during this period. Almost half of Americans die with less than $10,000 in financial assets.v

• **Beneficiary out-of-pocket costs are increasing.** The cost of Medicare Part B and D premiums and cost sharing as a share of the average Social Security benefit increased from 7% in 1980 to 14% in 2000 and up to 26% in 2010.vi

• **Under Medicare, many health care needs are not covered.** Medicare coverage is not comprehensive and tends to be less generous than typical large employer plans. For instance, Medicare does not cover dental, vision and most long-term care services and supports. Further, one study found that, for the average senior, Medicare covered $11,930 of the $14,890 in estimated annual health care spending – less than would be covered under either the
Families on Medicare pay more for health care than non-Medicare households. On average, in 2010, Medicare households spent 15% of total costs on health care; whereas, non-Medicare households spent just 5%. Medicare and non-Medicare households spent similar shares on other basic needs, including housing, transportation, food and other necessities. This fact is attributable to lower average household budgets overall ($30,800 vs. $49,600 in 2010) and higher average health care spending among Medicare households than non-Medicare households ($4,500 vs. $2,450 in 2010).vi

Increased cost sharing often leads to adverse health consequences and can increase total spending on health care. Some policymakers want to increase beneficiary cost-sharing in order to reduce perceived over-utilization of unnecessary medical services. Such efforts, however, will also lead people to forgo medically necessary services, such as not complying with prescribed drug use due to cost, or putting off care and prevention until expensive emergency services are needed. As a result, higher cost sharing backfires, since sicker patients will require more costly and invasive care down the road.

Baby Boomers face increased financial uncertainty due to the economic downturn. Today’s working adults need Medicare to remain affordable, particularly due to declining home values, diminished retirement accounts, and job loss caused by the recession. Estimates suggest half of all Baby Boomers will live on incomes less than $27,000 per year. Moreover, from 1992 to 2007, the average overall debt for 55 to 64 year old households more than doubled to $70,370. Debt among older adults (age of 55+) continues to increase—63% had some level of debt.

Medicare low-income protection programs are broken and must be modernized. According to the most recent estimates by CBO, only 33% of eligible beneficiaries were enrolled for Qualified Medicare Beneficiary (QMB) benefits and only 13% were enrolled for Specified Low-Income Medicare Beneficiary (SLMB) benefits. In addition, rigid, unreasonably low asset tests (not imposed on those under age 65 to receive low-income protections) penalize beneficiaries by denying eligibility to those did the right thing during their working years by setting aside a modest nest egg of savings.

Medicare Beneficiary Characteristics and Costs

**EXHIBIT 1**

**Characteristics of the Medicare Population**

**Percent of total Medicare population:**

- Income below $22,000: 50%
- Savings below $53,000: 50%
- 3+ Chronic Conditions: 45%
- Cognitive/Mental Impairment: 29%
- Fair/Poor Health: 28%
- Under-65 Disabled: 17%
- Functional Limitations: 15%
- Long-term Care Facility Resident: 4%

**NOTE:** Total household income and savings for couples is split equally between husbands and wives to estimate income for married beneficiaries.

**EXHIBIT 2**

**Relatively few Medicare beneficiaries have really high incomes**

**Half live on incomes of less than $22,000 (2010)**

Distribution of Medicare population, by per capita income, 2010:

- < 1% live on incomes of $150,000+
- 5% had incomes of $87,000+
- 50% had incomes below $22,000
- 25% had incomes below $13,000

**NOTE:** Total household income for couples is split equally between husbands and wives to estimate income for married beneficiaries.

**EXHIBIT 3**

Medicare households spend significantly more than non-Medicare households on health care expenses

- **Medicare Household Spending**
  - Transportation: $4,273 (13.0%)
  - Other: $6,375 (20.6%)
  - Food: $4,791 (15.5%)
  - Health Care: $4,620 (14.9%)
  - Housing: $10,907 (35.2%)

- **Non-Medicare Household Spending**
  - Transportation: $8,056 (15.1%)
  - Other: $15,276 (30.5%)
  - Food: $7,369 (14.7%)
  - Health Care: $2,404 (4.8%)
  - Housing: $17,039 (34.0%)

Average Household Spending = $30,966
Average Household Spending = $50,143

---

**EXHIBIT 4**

Medicare households just above the poverty level spend a greater share of their household budgets on health care than the poorest and highest-income households

**Share of household budget spent on health care:**

- Less than 100% FPL: 13.6%
- 100% - 199% FPL: 16.4%
- 200% - 299% FPL: 16.1%
- 300% - 399% FPL: 15.9%
- 400% FPL or more: 12.9%

**Share of Medicare Households:**

- Less than 100% FPL: 17%
- 100% - 199% FPL: 36%
- 200% - 299% FPL: 20%
- 300% - 399% FPL: 10%
- 400% FPL or more: 17%
